Ivane Javakhishvili Tbilisi State University Faculty of Exact and Natural Sciences

Doctoral program: Geography Address: Tbilisi i. Chavchavadze Ave.

The development line of modern education has always been visible, the goal and task of the school should be: mastering a profession, transferring the accumulated knowledge of humanity, developing thinking, improving the quality of teaching, civic education, personal and intellectual development as well as mastering knowledge, improving the quality of teaching, forming a worldview, competitiveness, education should be more about developing independent thinking and skills, rather than overloading the mind with other people's thoughts, "A good teacher makes you think even when you don't want to." Reading, writing, arithmetic are only important when they help our children become more human. The school should ensure: mastering knowledge and skills in the relevant field, developing the ability to think independently, creatively, critically, and develop the ability to identify, formulate and solve problems, and readiness to adapt to changes. Modern school education should take into account the demands of society and international experience. The school should serve to create programs that ensure the improvement of pedagogical research and methods and the retraining of school teachers to take into account innovative methods of teaching and learning.
