Department of Computer Science, Faculty of Exact and Natural Sciences, Ivane Javakhishvili Tbilisi State University, 11 University ST. Tbilisi, Georgia

This project aims to develop a unified informational web platform for the Faculty of Exact and Natural Sciences of Ivane Javakhishvili Tbilisi State University. In modern universities, web platforms play a crucial role in the fast dissemination of information and in improving communication between students, academic staff, and employers.

The main objective of the project is to create a multifunctional platform that brings together official faculty information, academic programs, news, events, student professional profiles, and a dedicated section for employers within a single digital environment. At the same time, the system is designed to be user-friendly, secure, and adaptable to the needs of different types of users.

The project will utilize modern web technologies, user-centered UX/UI design principles, a well-structured database architecture, and secure authentication mechanisms. The platform will support online registration for faculty events and enable students to present their professional experience and skills to potential employers.

As a result, a modern, flexible, and efficient web platform will be created, simplifying access to information, enhancing communication among all faculty stakeholders, and supporting students' professional and career development.
