Department of Computer Science, Faculty of Exact and Natural Sciences, Ivane Javakhishvili Tbilisi State University, Tbilisi, 11 University St.

The proposed project aims to develop a unified digital platform for university alumni, which will serve as a modern space for professional development and knowledge sharing. The core idea of the project is to establish a sustainable system that enables alumni from different generations to maintain continuous communication with Ivane Javakhishvili Tbilisi State University and with each other, thereby fostering their professional growth and development.

The main challenge addressed by the project is the lack of effective communication among alumni and the absence of a centralized system for organizing and managing alumni data. At present, there is no specialized resource that ensures the systematic management of alumni information and their active involvement in university activities. Existing alumni networks do not meet specific institutional needs, which results in the loss of significant potential for experience exchange and career support. Therefore, the creation of a dedicated platform is essential to overcome this challenge.

To address this problem, the project adopts a comprehensive approach based on the implementation of modern web technologies and the development of user-oriented functionality. The platform will integrate several key modules, including an exclusive job portal that connects employers with qualified university graduates, as well as a forum for events and professional meetings that promotes the exchange of sector-specific knowledge and practical experience. The system will be developed incrementally, allowing continuous improvement based on user feedback.

Upon completion, the project is expected to produce significant positive outcomes. First, the level of alumni engagement will increase, and the university community will be strengthened. The platform is anticipated to become an effective tool for career advancement, directly contributing to higher employment rates among graduates.

In conclusion, the project will create a new digital environment where academic knowledge and practical experience intersect. This will represent an important step toward supporting individual alumni success and enhancing the university's reputation both nationally and internationally.
